THE FLEX-HONE® SOLUTION

Brush Research Manufacturing has a long history of solving difficult finishing problems with brushing technology. Established in 1958, our tradition of research, innovation and manufacturing excellence has helped solve problems in the sophisticated environments of nuclear energy, aerospace and computer technology as well as industrial applications.

BRM has long been a leader in the art and science of abrasive surface finishing culminating in the Flex-Hone® Tool. BRM was one of the first companies to advocate the critical need for finer surface finishes to optimize machine performance.

Today BRM remains at the forefront of abrasive finishing technology. Our commitment to the advancement of surface finishing remains as strong as ever and we are constantly experimenting with new materials and applications.

As a full line manufacturer of power brushes, twisted in wire brushes and the Flex-Hone® Tool we stand ready to assist you in finding the best solution to your finishing needs.

Our extensive network of both domestic and foreign stocking distributors and our trained staff of customer service specialists assures you of instant access to world wide solutions tailored to your individual needs.

The Flex-Hone® is used in many different industries including:

- **AUTOMOTIVE**
- **AEROSPACE**
- **MARINE**
- **GENERAL INDUSTRIAL**
- **MANUFACTURING**
- **OIL AND GAS APPLICATIONS**
- **FIREARMS**
- **MUSICAL INSTRUMENTS**
- **FLUID POWER APPLICATIONS**

Brush Research Manufacturing is proud to be an ISO 9001 certified company. Registration to ISO 9001 demonstrates compatibility to an international set of standards for quality and continuous improvement. BRM is committed to meeting or exceeding our customer's expectations, this goes for the quality of our products as well as our service.

HOW TO ORDER CATALOG ITEMS

+ Flex-Hone® Tools

The Flex-Hone® Tool is trademarked and registered in all major trading countries of the world.

The Flex-Hone® Tool is always used in an oversized condition. Our sizes are listed by the nominal bore in which the hone is intended to be used.

Example:

If you have a 4" bore, order a 4" Flex-Hone®

How to Create a Part Number: GBD-4" 120 S/C - GBD=style, 4"=Diameter, 120=Grit Size, S/C=Silicon Carbide Abrasive

These selections will create the part number GBD40012.

+ Power Brushes

Order by catalog number and specify wire size and arbor hole.

Example:

BTS-6 .014 1/2" AH
add "S" for stainless steel:
BTS-6S .014SS 1/2" AH

If an arbor, keyway or threaded nut other than those shown is required, please contact factory for availability.

+ Twisted-In-Wire Brushes

Order by Catalog Number and if required please specify stem type, i.e., cut end, ring handle, pipe nipple, wood handle.

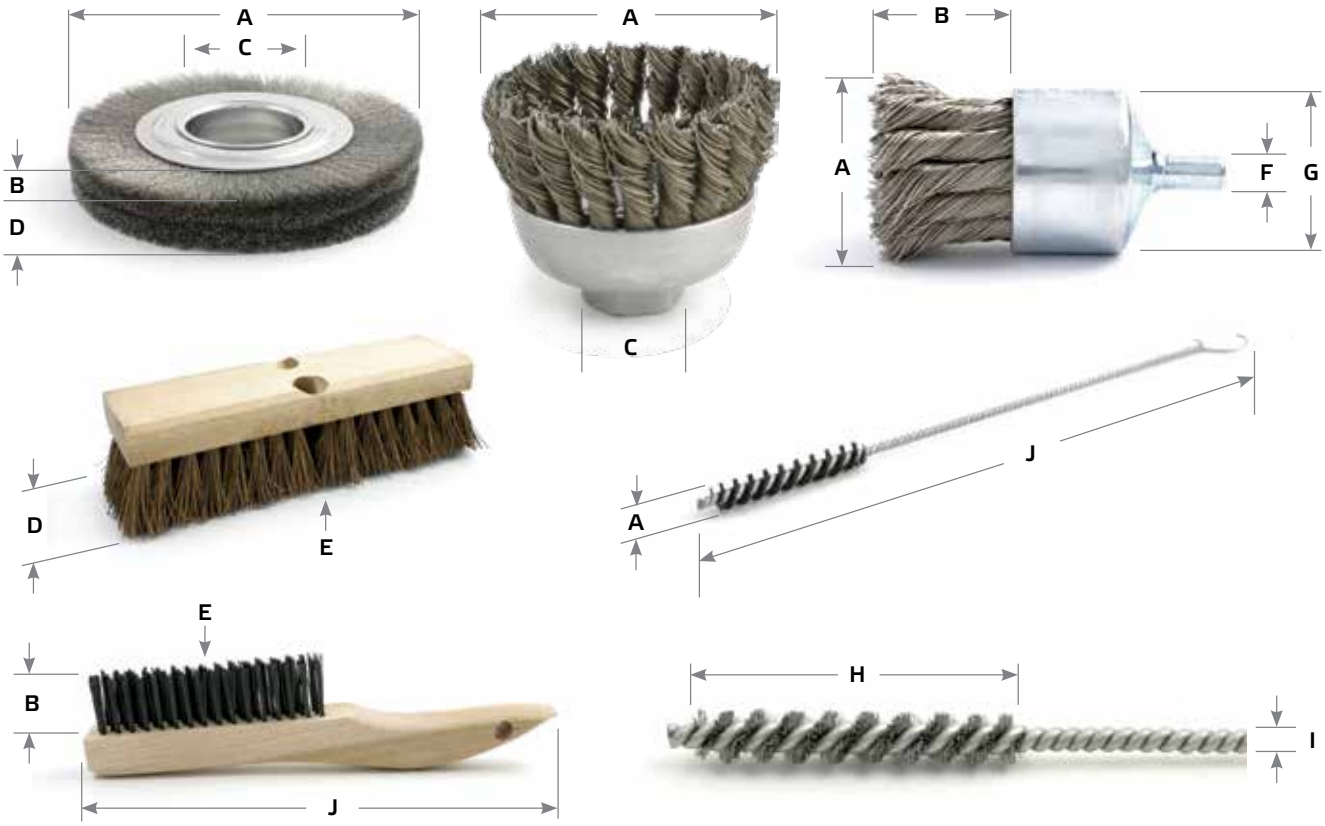
Example:

For plastic handle 85-N-500WH
For ring handle 85-N-500RH

+ Specials

Any item which is not shown in the Catalog will be considered a Special Order item. To order such an item:

1. Describe item fully
2. Furnish complete, detailed specifications
3. Send sample or blueprint



CUSTOMIZE YOUR PART & THE BRM DIFFERENCE

Brush Research provides cost-effective solutions for all of your application needs. With our many years of experience as brush manufacturers, we know that sometimes your application calls for brush tools with specific requirements and that is why we offer custom industrial brushes and brush tools. Our brush tools include the original Flex-Hone® Tool, twisted-in-wire brushes, automotive brushes and more! Custom brushes can be made to your exact specifications to ensure the perfect solution for your application.

There are a variety of ways to order your custom product:

CONTACT US OR PLACE AN ORDER ONLINE

Visit **http://www.brushresearch.com/custom-brushes.php** and choose one of the brush categories to fill out a custom order form online. You may also call our office at **(323) 261-2193** to place an order over the phone. Our team is available to assist you and help you determine the best product for your needs. Our office hours are Monday–Friday, from 8:00 to 4:30 p.m. PST. You may also email us at **info@brushresearch.com**.

FILL OUT A CUSTOM PART FORM

Brush Research has custom forms available for the Flex-Hone and Twisted-in-Wire Brushes. Please fill out the custom Flex-Hone® form located on page 9 of the catalog to provide us with the exact specifications for your products. Forms for Flex-Hone and Twisted Wire products are also available on our website using the link provided above.

SEND IN YOUR PART

Brush Research Manufacturing also offers the option of sending us your components in order for us to evaluate them in our lab and determine the best custom tool for your needs. This allows us to test various elements and address issues such as cycle time and product lifespan without interrupting your production schedule. **See page 65 of the catalog to fill out the form to get started.**

OUR COMMITMENT TO EXCELLENCE

For over 60 years, BRM has been given the opportunity to help our customers with their polishing, metal surface finishing and deburring needs. At Brush Research, we understand that Quality and Performance are not a given. These are goals that we work towards everyday, with the primary focus being happy customers.

This Commitment to Excellence radiates all through the company, from our customer service to our production, to accounts receivable departments and on throughout our organization and distributors. We have always maintained the importance of keeping our manufacturing in the United States where we can ensure that our processes are followed exactly as they were designed. We also feel pride for supporting our local communities. We continually improve our systems through the implementation of our ISO quality program. Our customer service and tech support are available to our distributors and customers around the world and have their clientele's best interests at heart. BRM is continually reinvesting in ourselves by improving our tools and machinery as well as exploring new products that can be of benefit to our customers. We thank you for the past 60 years and look forward to making the next 60 even better.

How To Use The Flex-Hone® Tool Step-by-Step Instructions

Flex-Hone for Firearms Instruction Video-Polish and Finish Barrels, Chambers & Cylinders

Flex-Hone®- In Machine Setup for Surface Finishing and Deburring

How To Automate Deburring & Finishing- Nampower Abrasive Disc Brushes

The Following Booklets Are Available Upon Request at No Charge

The Necessity Of A Plateaued Cylinder Wall Finish

A detailed presentation of several test run engines with performance results of lower blow-by, increased compression, less ring and cylinder wall wear with the Flex-Hone® Process.

A Study of Cylinder Wall Micro-Structure

An extensive study using a Scanning Electron Microscope to examine and compare the results of cylinder honing using rigid hones versus the Flex-Hone® Tool. Truly an expóse of what the honed cylinder wall surface should and should not look like. Three different studies are presented USA, UK and France for comparison.

FLEX-HONE®

FLEX-HONE® TOOL

For Any Type and Size of Cylinder

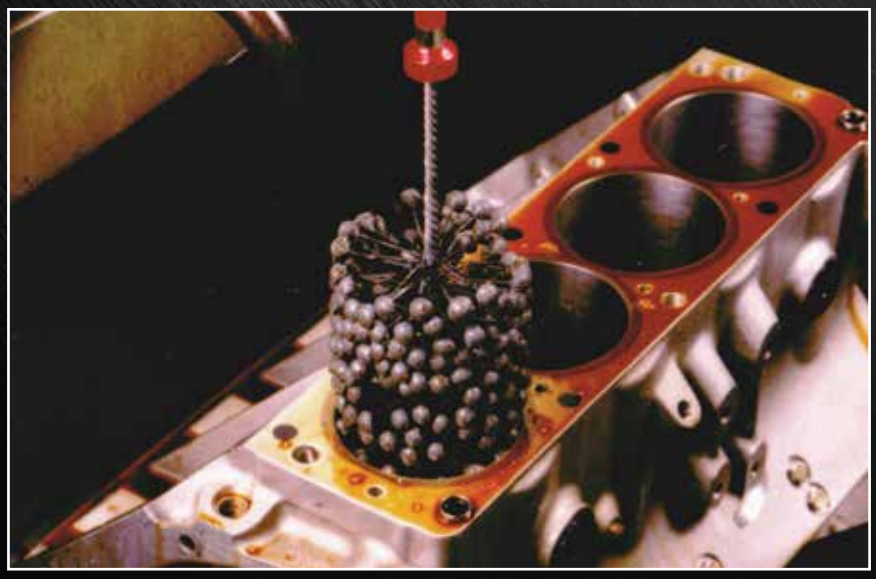
The Flex-Hone® Process (Super finishing) produces a controlled surface condition unobtainable by any other method. It involves finish, geometry and metallurgical structure. A high percentage plateaued surface is produced free of cut, torn and folded metal.

The Flex-Hone® Tool is a resilient, flexible, honing tool with a soft cutting action. The abrasive globules each have independent suspension that assures the Flex-Hone® to be self-centering, self-aligning to the bore, and self-compensating for wear.

Specifically, it is a low-temperature abrading process that exposes the undistributed base metal structure to produce a long wearing surface. It is a method of developing a surface on a metal part which is optically smooth and metallurgically free of any fragmented, amorphous or smeared metal from previous operations. It is accomplished at a low pressure where the "stones" float.

See and read the various booklets of actual tests covering almost every situation that will ensure a superior performance on surface finishes.

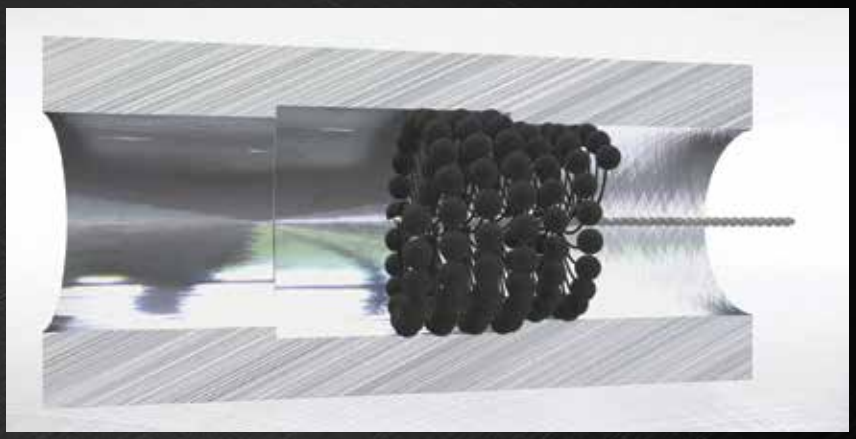
The particular type of Flex-Hone® crosshatch is extremely efficient in providing a multiplicity of oil grooves or valleys for oil retention as opposed to the often unidirectional or uneven valleys common to the conventional type rigid hone. A crosshatch remains as the cylinder wall has been wear-reduced by the Flex-Hone®.



Flex-Hone® Benefits Include:

+ Surface Finishing

The Flex-Hone® Tool is available in a variety of abrasive types and grit selections to provide the optimum surface finish on any base material. The Flex-Hone® is commonly used to reduce Ra, Rk and Rpk values while maintaining Rvk and Vo volume for oil retention. Using the Flex-Hone® Tool for surface finishing allows the sizing tools to do their jobs quickly and accurately without fighting surface finish. The Flex-Hone® is also used in adhesive bonding applications where a rougher surface is desired for bonding integrity.



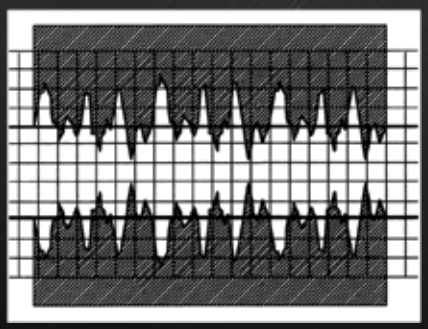
+ Deburring

Deburring of cross drilled holes is an expensive, time-consuming operation. The Flex-Hone® Tool can be used to remove burrs from cross drilled holes leaving a clean, radiused intersection. Because of its unique construction, the Flex-Hone® can be used online in machine tool applications or offline as a secondary operation.

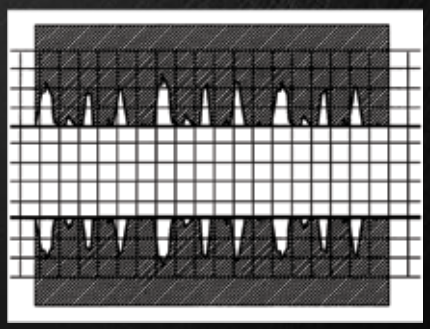
The tool is self-centering and self-aligning to the bore so elaborate, rigid set-ups are not required. It is advisable to use the tool in the main bore into which the cross holes break. Best results are obtained by rotating and stroking the tool a few strokes in a clockwise direction, removing the tool from the part, reversing the spindle and then rotating and stroking the tool in a counter-clockwise direction for a few more strokes. This forward and reverse rotation creates a more symmetrical deburring pattern.

+ Plateau Finishing

Brush Research pioneered the concept of a plateau finish and is a strong proponent of the benefits of a cross hatch, plateaued finish. The concept involves removing the peaks produced by prior machining operations and creating a substantially flat or plateau finish. A plateau finish created by the elimination of peaks allows rings and seals to seat without damaging their edges. The cross hatch pattern will aid in lubrication control and retention, reduce seepage in hydraulic and pneumatic applications and promote longer seal life.



A: Before Flex-Hone®



B: After Flex-Hone®

If Your Specifications Call For:
Developing a surface plateau of over 60%, Producing an oil holding cross-hatch pattern, Reducing Ra, Rpk and Rvk values, Increased bearing area...

If You Want Benefits of:
Lowered oil consumption,
Less blow-by,
Less friction,
Improved sealing surface...

Then Flex-Hone® it!

INDUSTRY APPLICATIONS

The Flex-Hone® Tool provides the ideal surface finish in any type or size of cylinder. The benefits of the Flex-Hone® Tool are enjoyed across an extensive range of applications including:

+ AUTOMOTIVE
+ MILITARY
+ AEROSPACE
+ MARINE
+ GENERAL INDUSTRIAL
+ MANUFACTURING
+ OIL AND GAS APPLICATIONS
+ FIREARMS
+ MUSICAL INSTRUMENTS
+ FLUID POWER APPLICATIONS
+ HYDRAULICS
+ ALUMINUM EXTRUSIONS
+ EARTH MOVING EQUIPMENT
+ ...AND MORE!

BE CREATIVE!

At Brush Research Manufacturing, we understand that some of your deburring and surface finishing applications require non-standard Flex-Hone solutions. This is why we're happy to provide you with custom Flex-Hone® Tools. With the outstanding reputation our standard tools have received, you can be sure that your custom Flex-Hone® will live up to that reputation as well. We will gladly manufacture Flex-Hone® Tools according to your exact specifications. To get started, fill out the project information below to supply us with the details we need to manufacture your custom Flex-Hone®.

Flex-Hones for Adhesion Applications
The Flex-Hone® can be manufactured in grits as coarse as 20. This is a fast and effective solution to roughen the surface for adhesive bonding.

CUSTOM FLEX-HONE® SPECIFICATIONS

FLEX-HONE® TOOL

FLEX-HONE® APPLICATIONS

The Flex-Hone® Tool is always used in an oversized condition. Our sizes are listed by the nominal bore in which the hone is intended to be used. Order by bore size. For more information, please see the bottom of pg. 13.

Typical Applications Include:

Automotive Applications
+ Piston Pin Bore
+ Engine Cylinders
+ Block Liners
+ Valve Guides
+ Cam Bearing Bore
+ Crank Bores
+ Brake Cylinders
+ Clutch and Brake Master Cylinders
+ Brake Rotors
+ Connecting Rods

Marine Applications
+ Main Engines
+ Generator Engines
+ Hydraulic Cylinders
+ Air Intake Lines

Firearms Applications
+ Barrels
+ Chambers
+ Forcing Cones
+ Paintball Barrels

Industrial Applications
+ Air Compressors
+ Hydraulic Ram Cylinders
+ Hydraulic Motor Bodies
+ Pneumatic Cylinders
+ Valve Housings
+ Pump Housings
+ Surface Finishing of Boiler Components
+ Compressed Air Tool Bodies
+ Finishing of Stainless Steel Tubing
+ Mechanical Decontamination of Nuclear Tube Sheets
+ Roughening Hossel Holes in Golf Clubs for Adhesion

Musical Instruments
Oil and Gas Applications
Fluid Power Applications
Aerospace Applications

FLEX-HONE® KITS

**Kits have a savings of 10% over individual purchases.*

Part Number	Flex-Hone Sizes Included in the Kits	Grit/ Abrasive
10 Piece Automotive Kit		
14353	10mm, ½, ⅝", ¾", ⅞", 1", 1¼", 1½", 1¾", 2"	180SC

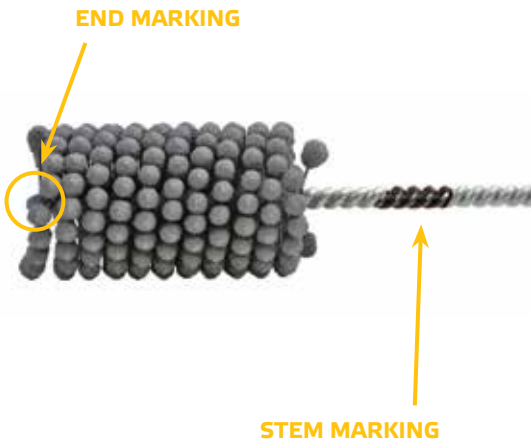
Yellow	400	800
Pink	600	
Light Blue	800	2500
Green	Levigated Alumina available in extra fine grit only	

FLEX-HONE® COLOR GUIDE



The Flex-Hone® Tool should be securely held in a collet, chuck, or similar holding device. It is best to use the shortest shank possible for your application. Always wear eye protection. The Flex-Hone® Tool should be well coated with a good quality cutting oil or honing fluid and rotating prior to entry and should continue rotating until fully removed from the part. RPM from 60 to 1200 depending on diameter. Never exceed 1200 RPM. Start with a spindle speed between 350-800 RPM. You may need to experiment to find the optimum speed for your application. The Flex-Hone® Tool should have a continuous stroke rate between 120 to 180 inches per minute. Final stroking may be accelerated to develop a 45º crosshatch finish. Use the minimum honing time needed to achieve the required finish. Average honing time is 10-45 seconds, (5-60 strokes). DO NOT over hone. Clean the cylinder after honing using hot, soapy water and brush the cylinder walls with a cleaning brush. Dry the cylinder and continue to clean with a lint free cloth coated with a light oil or mineral spirits. Continue to clean until the lint free cloth remains clean.
SEE OUR FLEX-HONE® RESOURCE GUIDE FOR MORE RPM RECOMMENDATIONS.

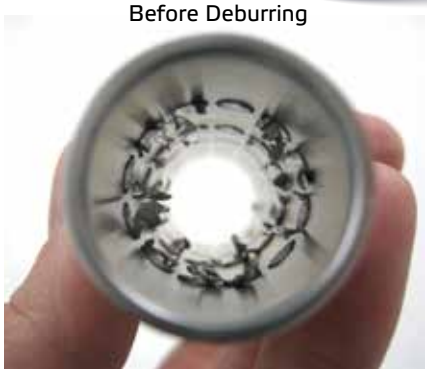
SOLUTION SHOWCASE

CROSS HOLE DEBURRING

Before Deburring



After Deburring

PROBLEM: Efficiently deburr dozens of cross drilled holes
SOLUTION: Standard Flex-Hone can deburr cross drilled holes simultaneously in a single set by inserting the tool through the main bore

Cross hole deburring has become a common set-back when finishing parts. Time is money and the deburring of each individual cross drilled hole can be very labor intensive. The Flex-Hone® can effectively deburr numerous crossed drilled holes in a single set up through the main bore.

TIP: Rotate the tool clockwise for several strokes, reverse the spindle, and then rotate the tool counter-clockwise. This will quickly and efficiently achieve a symmetrical deburring pattern.

STANDARD DUTY FLEX-HONE®

Order by Bore Size, Grit and Abrasive Type

HEAVY DUTY FLEX-HONE®

Order by Bore Size, Grit and Abrasive Type

SOLUTION SHOWCASE

FLEX-HONE® COOL TIPS

- Tool diameter is determined by bore size. The Flex-Hone® is always produced and used in an oversize condition. For example, a 1" Flex-Hone® is ordered if a 1" bore is to be finished and the tool is provided oversized. If the bore size is between standard Flex-Hone® sizes, the next larger standard Flex-Hone® should be selected.
- The Flex-Hone® MUST be used with a lubricant.
- For visual step-by-step instructions on how to properly use a Flex-Hone®, please check out our How-To Video located on our website.
- For more detailed information on abrasive and grit selections, operating RPMs, potential applications and much more, please download a copy of our Flex-Hone® Resource Guide located in the literature section of our website.
- Flex-Hone® Accessories-Extensions are an easy way to reach long bore applications.

SOLUTION SHOWCASE

LARGE DIAMETER FLEX-HONE®

PROBLEM: Servicing large diameter bores in the field
SOLUTION: Large diameter Flex-Hones are an affordable and portable solution

When it comes to servicing big bore diesel engines, the Flex-Hone® is a portable and low-cost tool that can be used to speed up cylinder servicing in the shop or in the field – deglazing, de-burring and cross-hatching in one smooth operation.

Clarence Mayers, coordinator for Diesel Supply Company (Odessa, Texas) says, "Getting top-to-bottom cylinder or liner wall coverage is difficult to do with other tools. The Flex-Hones that we sell are approximately 12-18 inches wide. So, if the hone is ran two or three inches past the bottom of the liner, that's not a problem. Most of the hone is still inside the cylinder, so it can go down and complete the bottom of the piston travel area. The same applies to the top of the liner, where it gets chamfered because of where the top ring travel ends. The Flex-Hone® can blend that area quite easily."

In addition to diesel engines, large diameter hones are often used for decontamination of large pipes, finishing and cleaning of pumps, valves and generators. Flex-Hones are available up to 36" standard.

SOLUTION SHOWCASE

FLEX-HONE® FOR FIREARMS

PROBLEM: Efficiently finish ammunition loading dies
SOLUTION: The Flex-Hone® increases efficiency by an estimated 60-70%

For decades, our firearms tools have been trusted by hobbyist, gunsmiths and manufacturers worldwide. These honing tools have become a standard for finishing and polishing chambers, cylinders and shotgun barrels. The result is reduced jamming, sticking and brass scarring. In recent years, we have discovered the potential for this tool in other areas of the firearms industry.

RCBS, a member of ATK's Security & Sporting Group and a leading producer of high-quality ammunition reloading equipment for over 60 years, came to Brush Research for assistance in finishing their reloading dies. After incorporating the Flex-Hone® into their CNC equipment, Tim Taylor, a RCBS engineer said "the new automated process is a real game changer. It is probably 60-70% more efficient than doing it by hand. Also, there was a substantial increase in quality."

FLEX-HONE® TOOL ACCESSORIES

FLEX-HONE® OIL

TIP NOTE:
The Flex-Hone® Tool **always** requires the use of a lubricant. Solvents should be avoided.

Specifically formulated for use with the Flex-Hone® in honing all types of metals. Contains a blend of honing and lapping oils, a lard oil to prevent galling of aluminum, a moisture dispersant, a non ionic surfactant wetting agent to assure complete lubrication of the surface and a special additive to help keep the metal cuttings and containments in suspension.

Use sparingly, only a small amount needed on cylinder walls to create a slurry.

Clean the cylinder after honing with cloth or rags and clean motor oil until the cloth stays clean, then thoroughly wash cylinders with hot water and soap. Oil lightly afterwards to prevent rusting.

On hydraulic cylinders use only hydraulic brake fluid or a non-petroleum water-soluble lubricant.

Available In:

Part Number	
FHP	½ Pint Bottle
FHQ	1 Quart Bottle
FHG	1 Gallon Bottle
FH5G	5 Gallon Bottle

CYLINDER WASHING BRUSH

Made with 6-12 Nylon for efficient cleaning of cylinder walls after honing. Use with detergent and warm/hot water as recommended by Caterpillar, etc. Special diameters to 14".

Part Number	Diameter

CHAMFER FLEX-HONE® TOOL

Benefits of Chamfer Flex-Hones:

+ Polish and radius the outer corners (the intersection of the chamfer and flange face) as well as the inner corners and hole.
+ Increased flexibility allows the tool to pass through thin web sections and polish the chamfer on the back side as well.
+ Polished and radiused chamfer surfaces are beneficial on critical rotating parts.

ABRASIVE NYLON FILAMENT BRUSHES

WHAT IS ABRASIVE NYLON?

The cutting action of the filaments of abrasive nylon brushes are unique compared to traditional metal filaments that are designed to cut on the filament tips. Abrasive grains encapsulated in the nylon are exposed on all surfaces of the brush filament. Abrasive action occurs on both the tip of the nylon brush filament as well as the nylon filament sides. In application, the lateral surface of the nylon filament is often drawn across the work surface, functioning much like a flexible abrasive file. Filaments of abrasive nylon brushes are composed of heat stabilized nylon and abrasive grain that are coextruded into monofilament brushes. The results are flexible, homogeneous nylon abrasive brushes that have approximately 30% abrasive loading by weight. Common abrasives used in this material include aluminum oxide, silicon carbide and diamond.

Filaments of nylon abrasive brushes are produced in a variety of filament diameters, abrasive grain types, abrasive grain sizes and abrasive loading. As abrasive grain size increases so does nylon filament diameter. Larger nylon diameter filament is required to effectively bond larger abrasive grains. Larger nylon diameter filaments are less flexible which make them more susceptible to brush filament fatigue and fracture. Smaller diameter filaments bend and recover more easily and more filaments can occupy a given area putting more brush abrasive in contact with the work piece. Brushes made from abrasive nylon should not be run faster than 3500 SFM to avoid overheating and material transference. Abrasive nylon brushes are ideal for light deburring, surface finishing and finishing of irregular profiles.

NAMPOWER™ BRUSHES

NAMPOWER™ ABRASIVE DOT STYLE COMBINATION DISC BRUSH

NAMPOWER™ ABRASIVE TURBINE STYLE COMBINATION DISC BRUSH

Dot style and Turbine style disc brushes are designed with a combination of Silicon Carbide and Ceramic filaments for general purpose edge deburring and surface finishing applications. Dot Style are excellent for light deburring applications when short cycle times are important with greater flexibility. Turbine Style are ideal for performing medium to heavy deburring applications.

NAMPOWER™ BRUSHES

100mm, 125mm and 150mm Nampower Disc brushes are designed to work with our 25mm shank large flow though coolant holder. The 50mm, 60mm and 80mm disc brushes are designed for our 16mm precision ground shank flow through coolant holder. The flow through design creates better lubricant dispersion which permits the brush to run at greater cut depths and drastically reduces heat generation.

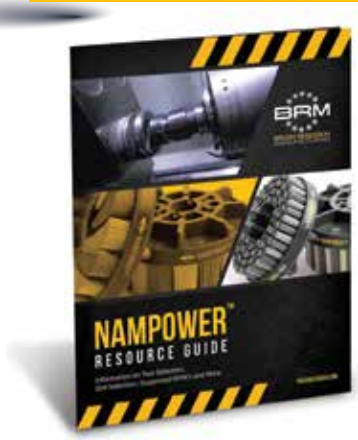
SOLUTION SHOWCASE

KNIFE MAKER USES NAMPOWER™

PROBLEM: Deburr and remove tool marks on titanium knife blades and handles
SOLUTION: Nampower Disc Brushes produce the ideal finish

Zodiac, a prototyping and low-volume production shop in Orange, California, specializes in folding and fixed blade knives as well as general machining and CAD work. Owner Ken Spaulding's materials of choice are titanium, aluminum and stainless steel.

Once owner, Ken Spaulding, discovered Nampower brushes, many components made at the shop are now deburred, cleaned and polished with a 100mm Nampower Dot Style brush. "It's faster in one pass to run a Nampower brush over all the pockets in a knife frame than to meticulously use a chamfer tool," Spaulding explains. "If I'm running 200 pieces, I can deburr and surface finish a part with a Nampower brush in 8 to 12 seconds versus using a chamfer tool, which can take anywhere from one to two minutes per part."



For more detailed information on Nampower Tools, Download a copy of the **Nampower Resource Guide** located in the literature section of our website.

NAMPOWER™ BRUSHES

NAMPOWER™ ABRASIVE HEX-DRIVE™ TOOLS

These tools are designed for use in semi-automatic and fully automatic machinery, including NC, CNC and robotic machine tools. The unique Hex-Drive™ system allows the tools to be turned in both directions for 360 finishing. Typical applications include deburring, edge radiusing and general surface finishing.

AHX5180		.035/180SC	*	1″	

APPLICATIONS:

+ Deburring
+ Rust Removal
+ Gasket Cleaning & Removal
+ Roughing
+ Finishing prior to painting and plating
+ Removal of silicon glue, paper gaskets and flash from rubber and plastic
+ Pre-cast concrete mold cleaning
+ Spot finishing
+ Improve surface finish
+ Weld cleaning
+ Clean fiberglass
+ Plastic automotive parts

***NOTE:** 3″ and above require the Drive Arbor (see below).

NAMPOWER™ CERAMIC ABRASIVE END BRUSHES

NEW

These high density, solid end brushes offers more cutting points for increased efficiency and performance. The machined aluminum and hard coat anodized cups hold state of the art ceramic abrasive filaments that have lasted 3-5 times longer than the competition during testing.

COMMON APPLICATIONS:

+ Finishing and Deburring
+ Edge Break
+ Surface Prep
+ Blend Out Machining Marks
+ Homogenize Part Surface

COMMON MATERIALS:

+ Aluminum
+ Carbon Steel
+ Stainless Steel
+ Brass
+ Bronze
+ High Nickel Alloys

NAMPOWER™ BRUSHES

NAMPOWER™ COMPOSITE HUB ABRASIVE NYLON WHEELS

For machine based or off-hand deburring processes, Nampower™ Composite Hub radial wheels offer a safe, durable alternative to wire wheels or non-woven abrasives. Their construction and flexibility provide a long lasting wheel with less filament breakage and superior performance.

+ Higher filament density for longer brush life
+ Shorter parts cycle time and increased aggression
+ Less filament breakage because they are not pre-stressed
+ A virtually indestructible core
+ Wider hub thickness with uniformly distributed filaments
+ Balanced construction that reduces machine fatigue

Note: MSFS is 3,600. Required Composite Wheel adapters sold seperately (see pg. 25).

SOLUTION SHOWCASE

ABRASIVE NYLON ADVANTAGES

When Should I use Abrasive Nylon Brushes?

+ Smooth internal surface finish
+ Light to medium deburring on internal diameter (ID) and outside diameter (OD) applications
+ Internal thread cleaning
+ External thread cleaning
+ Cleaning and light edge blending
+ Polishing

Advantages of Abrasive Nylon Brushes?

+ These brushes are non oxidizing...so there is no reaction with metal.
+ They are safer - There is no bristle fly out.
+ They are fast working and do not load.
+ Unlike Wire Brushes where the tips of the wire do all the work, Abrasive Nylon Brushes use both the tips and the sides of the filament to do the work.
+ Abrasive Nylon Brushes have flexible filaments that conform to part geometry.
+ You have the ability to change cutting properties by changing grits.
+ They can be run wet or dry....however, certain conditions may require the use of a coolant if the brush is put under stress resulting in heat. If the brush is exposed to excess heat, this can result in smearing of the nylon filament.
+ You have the ability to deburr and finish in one step.

NAMPOWER™ BRUSHES

Diameter	Part Number	Face Width	Trim Length	Arbor Hole	Grit
100mm (3.94")	DW100X5X600	5mm	12.5mm	20mm	.012/600
150mm (5.91")	DW150X10X600	10mm	19mm	3-¼"	.012/600
150mm (5.91")	DW150X15X600	15mm	19mm	3-¼"	.012/600
200mm (7.87")	DW200X10X600	10mm	30mm	3-¼"	.012/600
200mm (7.87")	DW200X15X600	15mm	30mm	3-¼"	.012/600

Note: It is suggested to stay under 2,500 SFPM in dry applications and 3,500 SFPM in wet applications. Required Composite Wheel adapters sold seperately.

DIAMOND WHEELS

Brush Research produces machined arbor adapters in a variety of sizes. These adapters are designed to offer increased brush support, less brush vibration and longer brush life for our Composite Hub Wheels in Silicon Carbide and Diamond.

Arbor Size	Composite Wheel Adapter	Diamond Wheel Adapter
½"	CWA2-12	DWA314-12
⅝"	CWA2-58	DWA314-58
¾"	CWA2-34	DWA314-34
20mm	CWA2-20mm	DWA314-20mm

1"	CWA2-1	DWA314-1
1¼"	CWA2-114	DWA314-114
1½"	CWA2-112	DWA314-112

COMPOSITE WHEEL ADAPTERS

SOLUTION SHOWCASE

COMPOSITE HUB ABRASIVE NYLON WHEELS

PROBLEM: Efficiently deburr brake muzzles
SOLUTION: Abrasive Nylon Wheel Brushes

When an application calls for surface finishing, cleaning, polishing, deburring, edge blending or removal of paint, rust or other contamination, a wheel brush is often the ideal solution. However, when harder materials are involved, wire filaments can break off, or deform – even if crimped. Abrasive Nylon wheel brushes are an ideal solution.

For JR Precision and Welding, a machine shop in Houston, Texas,the issue of removing large burrs from machined holes in an extremelyhard 4140 steel alloy part used as a muzzle brake for firearms was proving a challenge. After testing several options, JR percision tried a BRM abrasive nylon wheel brush. "The abrasive nylon brush removes just the right amount of material," says Mawazeb. "The surface finish actually matched what the customer wanted as well." Mawazeb says he also tried another brush from another supplier but was not impressed. The filaments were angled down and the fill was not as compact as the abrasive nylon wheel brush from Brush Research.

Operator Safety:

1. Always wear eye protection.
2. Observe maximum safe speed requirements.
3. Keep machine guards in place.
4. Wear appropriate safety clothing.

SOLUTION SHOWCASE

NYLON BRUSH TIPS

Is your brush not aggressive enough? Try one of these options:

+ Increase surface speed by increasing spindle RPM
+ Use a coarser grit abrasive
+ Increase brush diameter
+ Increase fill density
+ Decrease trim/filament length
+ Increase pressure

Is your brush too aggressive? Try one of these options:

+ Decrease surface speed by decreasing spindle RPM
+ Use a finer grit abrasive
+ Increase trim/filament length
+ Decrease filament diameter
+ Reduce pressure

SERIES 85–AY ABRASIVE NYLON

+ Galvanized Steel Stem Wire
+ Abrasive Nylon Fill
+ Single Stem-Single Spiral
+ Bottom End Construction
+ Specify grit type and size when ordering

See page 26 for abrasive nylon chart

TOOL TIP:

Abrasive Nylon Twisted-in-Wire brushes are an excellent solution to mild surface finishing and thread deburring. For diameters over 4mm, the Flex-Hone® is a faster, more efficient solution for finishing and crosshole deburring. Flex-Hones are not recommended for threaded applications.

SERIES 85–AD ABRASIVE NYLON IN DIAMOND

SERIES 90–AY ABRASIVE NYLON

+ Galvanized Steel Stem Wire
+ Rigid Double Stem-Double Spiral

ABRASIVE NYLON TWISTED-IN-WIRE

NEW

ABRASIVE NYLON RECTANGULAR FILAMENT BRUSHES

Rectangular filament brushes are available in 120 and 320 grit Silicon Carbide. Available in diameters from 2" to 5½".

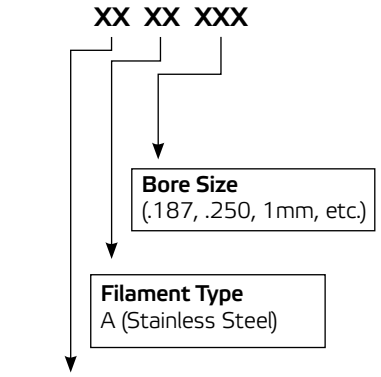
SERIES 81A STAINLESS STEEL

For through hole applications

Miniature Cross Hole Deburring System

How to Order BRM Miniature Wire Brushes:



Example:
81A25M

The inch kit includes .032, .047, .054, .063, .079, .094, .109, .125, .142, .156, .172 and .189 sizes. The millimeter kit includes 1mm, 1.5mm, 2mm, 2,5mm, 3mm, 3.5mm, 4mm, 4,5mm, 5mm, 5.5mm, 6mm and 6.5mm sizes. Also included with this selection is our premium double end pin vise which provides a safe and secure means of using the brush.

SERIES 81A STAINLESS STEEL MINIATURE BRUSH KIT

12-Piece Kits

Part Number	Description
81AKIT	81-A KIT (Inch)
81AMMKIT	81-A KIT (Millimeter)

Model PV460 is double ended, has a hexagonal locking collet and comes with 2 reversible 4-jaw chucks for ultimate versatility. Model PV467 offers a unique swivel action that allows for precise and consistent control during deburring.

PIN VISES – TOOL HOLDERS FOR MINIATURE BRUSHES

A secure method of holding small diameter brushes

Part Number	Type	Stem Diameters	Brush Diameters
PV460	Pin Vise - Hexagonal Type	0.125 Max. to any Min.	up to 5/16"
PV467	Pin Vise - Swivel Type	0.109 Max. to any Min.	up to 7/32"

TUBE BRUSHES

SERIES 83

These brushes can be used for thread deburring, tube cleaning, de-scaling and rust removal. They are cut for power and can be made with carbon steel, stainless steel, brass or nylon filament to provide a solution to a variety of cleaning applications.

SOLUTION SHOWCASE

MINIATURE BRUSHES

Small parts requiring deburring, edge blending or other surface finishing operations can present particular production challenges to manufacturers. Often production is taken off-stream resulting in reduced productivity and inconsistent product quality.

A miniature deburring brush can solve both the productivity and quality challenges involved when manufacturing parts of various small sizes, contours and materials. Precision Planting, Inc. (Tremont, IL), an industry leader in agricultural seed planting equipment, manufactures a variety of systems that are designed to solve exact seed spacing and placement issues.

"One of our newest systems has tubes that are injection molded, and we had great concern about removing the residual flash that was created by the molding process," explains Precision Planting engineer Derek Sauder. "It may only be only .002 to .005 in. Using BRM's miniature brushes have "allowed our products to become the most accurate planting equipment in the market," he says. "Our product is well-known and has a fine reputation in the marketplace. And this process helps us attain that. It is economical and gives us good results."

SOLUTION SHOWCASE

TUBE BRUSH TIPS

+ Never reverse a twisted in wire brush while in the bore. This will result in filament unraveling
+ Change the handle–most tube brushes can be manufactured with various handle types. If looped or wooden handles are not providing the proper cleaning, request cutting the handles for power.

Bottom End vs Cut End

A bottom end style brush features a turned end at its tip, with the filaments twisted all the way to the tip of the brush. The turned end protects the bottom of the closed hole from being damaged.

Series 85 brushes feature a bottom end style design.

Cut ends are used for through hole applications.

Available Cut End Brushes: Series 81, 83 and 84

SERIES 84 - FOR THRU HOLES

Ring handles may be cut off for power applications.

SERIES 86 - TUFTED END BRUSHES

Available on Special Order.

+ Used in clean-room operations.
+ Made with loop handles and stainless steel or nylon fill.
+ Tied tufts prevent scratches by the stem ends.
+ Contact factory with your specifications.

SERIES 87 - CENTER BRUSHES

Available on Special Order.

+ Power one end - Bearing the other.
+ Use in automated set-ups.
+ Contact factory with your specifications.

SERIES 88 - TAPERED BRUSHES

Available on Special Order.

+ Custom made to your tapered requirements.
+ For power operation or handle may be added for hand use.
+ Contact factory with your specifications.

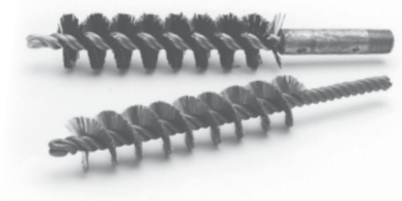
SERIES 89 - CONDENSER TUBE

½" to 4" diameters

Four wire single spiral with or without pipe nipple. Recommended for removing soft deposits (mud, algae, etc.) in straight tubes. Available in Stainless Steel, Carbon Steel, 6-12 Nylon and Brass.

+ 5/16" - 18 I.D. threaded nipple on ½" to 5/8" diameter.
+ 1/8" Pipe Nipple on ¾" diameter.
+ ¼" Pipe Nipple on 7/8" diameter and larger.

Nipples will be attached unless otherwise specified.



SERIES 90 - FLUE BRUSHES

Four wire, Double Spiral, with or without nipple.

+ 1/8" Pipe Nipple on ½" to ¾" diameter.
+ ¼" Pipe Nipple on 7/8" diameter and larger.

Nipples will be attached unless otherwise specified.

PWAST

Brush Research Mfg. is proud to offer the best parts wash brush on the market today. Injection molded Polypropylene handles, synthetic filaments for resistance to most solvent cleaners. Designed to be used in either petroleum-based or water based cleaning solutions. All metal parts are either stainless steel or brass for corrosion resistance. These are superior tools that will make each and every job easier and faster, saving both time and money. All tube fittings are manufactured to allow use on the most popular recirculating parts washers such as Enco, KleerFlo, Safety Kleen and others. The ergonomic styles will reduce any wrist strain and allow for increased pressure during cleaning.

+ Non-Slip Grip
+ Guaranteed not to mushroom
+ Heavy Duty Construction
+ Penetrating Tip

Part No.

PWA	Flow thru with tube
PWANT	Flow thru without tube
PWC	Non flow thru

The absolute best parts wash brush on the market today! Designed with the professional in mind. Made with synthetic filaments to resist most solvent type cleaners. Supplied with or without a 28" nitrite rubber tubing designed to fit 0.500 to 0.600 O.D. parts washer nozzles.

Part No.

PW6P	Flow thru with tube
PW6PNT	Flow thru without tube

A totally new concept in parts washing brushes. The ergonomic handle design reduces wrist fatigue. Made with Polypropylene handles with synthetic filaments to resist most solvent type cleaners.

Part No.

PW1P	Flow thru with valve and tube
PW1PNT	Flow thru valve and without tube
PW4P	Flow thru with valve and tube
PW4PNT	Flow thru valve and without tube

Both brushes incorporate a unique flow control system that allows you to control the amount of cleaning fluid desired. The large brushing area of the PW-1P makes the cleaning of large areas faster and easier than ever before. The PW-4P is designed for the automotive brake mechanics.

Part No.

PW ¾	¾" diameter aluminum handle Non flow thru scraper end

Our most popular selling parts wash brush, the PW-34, comes with polypropylene fill.

PWT	28" tubing made of nitrite rubber

Soft Tip Brushes

Wheels are a problem for all auto detailers. BRM's Soft Tip Wheel Cleaning Brushes push the dirt away, making cleaning more efficient. The unique, high quality soft-pointed tip allows the brush to access places other brushes cannot while lasting longer.

Part No.

PWCST	Soft tip straight handle
PWAST	Soft tip flow thru with straight handle

CUSTOM BRUSHES FOR DIESEL

Cummins Group
Stainless Steel wire with plastic handle to be used when changing injector while in truck.

Do not use on high speed drill motors. 1200 M.S.F. S.

KITS

OIL LINE KIT BRUSHES:
A kit of 9 brushes made in 6-12 Nylon for cleaning the Oil Lines.
Each kit contains:
+ 1 ea. - #1 (1/4" dia.)
+ 2 ea. - #2 (5/16" dia.)
+ 6 ea. - #3 (3/8" dia.).

1 Oil Gallery Kit Contains:
A Kit of 5 brushes made in 6-12 Nylon for cleaning the Oil Galleries.
Each kit contains:
+ 1 ea. - 5 (5/8" x 3" x 34")
+ 1 ea. - 7 (3/4" x 3" x 34")
+ 1 ea. - 8 (3/4" x 3" x 40")
+ 1 ea. - 38 (3/8" x 3" x 34")
+ 1 ea. - 42 (1/2" x 2 3/4" x 34")

1 E Kit Contains:

+ 3 ea. - #1, 1a, 2, 2a / 6 ea. -#3
+ 1 ea. - #4, 5, 6, 7, 8, 9, 38, 41, 42, 46, 10a(5")
+ Total of 29 brushes (Savings on reg. price)

VGNK (Nylon Valve Guide Kit) Contains: 1, 2, 3, 44N, 47N, 48N, 49N

VGCK (Carbon Steel Valve Guide Kit) Contains: 11C, 13C, 14C, 44C, 47C, 48C, 49C

OIL LINE, GALLERY BRUSHES

You can't have a clean engine with just a hot tank and an air hose with water. You need something to take out the old metal chips, the grinding compounds, the sludge and the dirt from the parts you can't see - the oil passageways. We use the finest-quality high-density 6-12 Nylon in our Nylon Brushes.

NYLON

Part Number	Dia.	x	Brush Part	x	OAL	Description: 6-12 Nylon
1	¼		x 2		x 10	Small Stiff Brush for Feed Line Holes
1a						Same as #1 but with light fill and flexible stem
2	5/16		x 2 ½		x 12	Stiff Brush for Crankshaft Holes and Valve Guides
2a						Same as #2 but with light fill and flexible stem
3	⅜		x 2 ½		x 12	Same as #2
4	⅝		x 3		x 12	For Feed Lines and Main Bearings
5	⅝		x 3		x 34	Same as #4, but with extra length
6	¾		x 3		x 12	For larger size of Lifter Holes
7	¾		x 3		x 34	For Main Oil Galleries
8	¾		x 3		x 40	For Main Oil Galleries
9	1⅛		x 3		x 14	For Lifter Holes
38	⅜		x 3		x 34	For Oil Galleries
41	½		x 2 ½		x 12	For Valve Guides
42	½		x 2 ½		x 34	For Main Oil Galleries
44	½		x 2 ½		x 12	Same as #41 but with light fill and flexible stem
46	1¼		x 4		x 12	For Tapered Pin Fitter
47	11/32		x 2 ½		x 12	For Valve Guides
48	13/32		x 2 ½		x 12	For Valve Guides
49	7/16		x 2 ½		x 12	For Valve Guides

CARBON STEEL (FOR THE ROUGH SPOTS)

Part Number	Dia.	x	Brush Part	x	OAL	Description: Carbon Steel
11C	¼		x 2		x 10	Same as #1, but in Carbon Steel Wire
13C	5/16		x 2 ½		x 12	For Cam Bearing Feed Lines and Valve Guides
14C	⅜		x 2 ½		x 12	For Cam Bearing Feed Lines and Valve Guides
15	⅝		x 3		x 12	For Push Rod Holes
16	⅝		x 3		x 30	For Oil Galleries
6C	¾		x 3		x 12	For Larger size Lifter Holes
7C	¾		x 3		x 34	For Main Oil Galleries
8C	¾		x 3		x 40	For Main Oil Galleries
18	1⅛		x 3		x 14	For Lifter Holes
38C	⅜		x 3		x 34	For Oil Galleries
44C	½		x 2 ½		x 12	Same as #41, but in Carbon Steel Wire
45	½		x 2 ½		x 34	Same as #42, but in Carbon Steel Wire
46C	1¼		x 4		x 12	For Tapered Pin Fitter
47C	11/32		x 2 ½		x 12	For Valve Guides
48C	13/32		x 2 ½		x 12	For Valve Guides
49C	7/16		x 2 ½		x 12	For Valve Guides

Add S to Cat. No. for Stainless Steel

Operator Safety:

1. Always wear eye protection.
2. Observe maximum safe free speed requirements.
3. Keep machine guards in place.
4. Wear appropriate safety clothing.

Specific Applications:

+ Machined Parts
+ Gears
+ Turbine Blades
+ Weld Slag Removal

TOOL TIPS

WIRE BRUSHES

Are you noticing that your brush action/marks are not uniform?

+ Increase trim length/wire length
+ Decrease fill density and brush face
+ Automate the process to eliminate irregularities produced by human error

Are you looking for longer brush life?

+ Increase fill density or brush face width
+ Decrease wire size
+ Use less pressure - Wire Brushes SHOULD NOT BE PUT UNDER EXCESSIVE PRESSURE

Are you having trouble with wire breakage?

+ Use less pressure - Wire Brushes SHOULD NOT BE PUT UNDER EXCESSIVE PRESSURE
+ Decrease wire size

Troubleshooting:

If you're encountering any of these challenges with your wire brushes, try one of these recommended options

(cont'd on page 47)

CRIMPED WIRE WHEEL BRUSHES

MULTI-DUTY NARROW FACE

Brush Characteristics

+ Narrow brushing face
+ High flexibility - long trim
+ Highest quality oil tempered crimped wire
+ Fine to medium coarse brushing action

Order by catalog number and specify wire size and arbor hole. When ordering stainless steel wire be sure to add the letter S to the catalog number.

Operator Safety:

1. Always wear eye protection.
2. Observe maximum safe free speed requirements.
3. Keep machine guards in place.
4. Wear appropriate safety clothing.

Brush Characteristics

+ Wide brushing face
+ Low flexibility
  – fast cutting action
  – long life
+ Highest quality oil tempered crimped wire
+ Heavily filled
+ Uniform brushing action

TOOL TIPS

WIRE BRUSHES

Is your brush not aggressive enough?
+ Increase surface speed
+ Increase wire size
+ Decrease trim length
+ Increase fill density or brush face width

Is your brush too aggressive?
+ Decrease wire size
+ Decrease RPM
+ Decrease face width and fill density
+ Choose a brush with longer wire length

Are you looking for a smoother finish?
+ Switch to an Abrasive Nylon Brush
+ Decrease wire size
+ Choose a brush with longer wire length
+ Increase RPM
+ Increase fill density or brush face width

Are you looking for a rougher finish?
+ Increase wire size
+ Decrease RPM
+ Decrease face width and fill density
+ Decrease trim length

Are you having problems with rolling or peening burrs instead of removing them?
+ Switch to an Abrasive Nylon Brush
+ Increase brush diameter
+ Increase wire size

Are you noticing that your brush action/ marks are not uniform?
+ Increase trim length/wire length
+ Decrease fill density and brush face.
+ Automate the process to eliminate irregularities produced by human error

Troubleshooting:

If you're encountering any of these challenges with your wire brushes, try one of these recommended options

(cont'd from page 45)

NWA-8	8"	2"	.006 .016 .022	½"	4,800

Note: For NWA-6" and 8" use ALA adapters. For more information, see pg. 57.

+ Used for light deburring, brushing, cleaning, polishing and surface finishing
+ Excellent fatigue life and resistance to most solvents

Specify catalog number, filament size and arbor hole when ordering.

Operator Safety:

1. Always wear eye protection.
2. Observe maximum safe free speed requirements.
3. Keep machine guards in place.
4. Wear appropriate safety clothing.

Copper center wheels are also available in nylon, tampico, abrasive nylon and encapsulation (see pages 26, 48 & 55).

COPPER CENTER WHEEL BRUSHES

Brush Characteristics

+ Small diameter brushing tools
+ Narrow brushing faces
+ Can be mounted in multiples
+ Designed to operate at high speeds
+ Light duty applications

Popular Applications

+ Deburring
+ Edge blending
+ Cleaning - Rust removal
+ Roughing for adhesion
+ Finishing for appearance

BNF-40	4"	.008	.008SS	15,000

CIRCULAR END

Product Description:

Available in sizes from 1 inch to 4 inches. The circular end type brush provides side cutting action. Will not score the bottom of blind holes. Ideal for use on a drill press or high speed portable tools.

FLARE BRUSHES

The DEB-3, 3x, 4 and 4x Flare Brushes have a cobalt base hard facing which is flame-coated to the ends of stainless steel aircraft cable.

DEB-3

+ 3-Prong Heavy Duty.
+ Use with slow RPM drill motor for chipping operation. Suitable for carbon removal from ports, etc.
+ Will cover IDs up to 1 ½".

DEB-4

+ 5-Prong Light Duty.
+ Will flare out at 2,000 RMP for rust and scale removal from pipe IDs. Long life as it does not get hung-up, which will twist cables.
+ Will cover IDs up to 5".

DEB-3x

+ Similar to DEB-3 except with longer prongs up to 4" IDs.
+ For rust removal from pipe IDs at 2,000 RPM.

DEB-4x

+ Similar to DEB-4 except made with longer prongs up to 7" IDs.

Note: Available with threaded stem on special request.

DEB 3

DEB 4

MANDREL MOUNTED COPPER CENTER WHEEL BRUSHES

MANDREL MOUNTED COPPER CENTER

General Applications:

+ Slug and Scale Removal
+ Flash Removal
+ Rust and Paint Removal
+ Carbon Cleaning
+ Weld Cleaning

		Wire Size

BMC-30	3"	.008 .0104 .0118 .014		5/16"	25,000

Note: Speeds greater than 8,000 RPM do not enhance operation of brushes rated at 25,000 max. safe free speed.

MANDREL MOUNTED FLARED

Constructed on ¼" diameter stems. Eliminates the need for separate adapters when installing in chucks or collects of portable tools or drill presses. These brushes are ideal for internal pipe cleaning, carbon removal, and light rust and scale removal.

		Wire Size		
Catalog Number	Dia.	Carbon Steel	Stainless Steel	Maximum Safe Free Speed (RPM)

Note: Speeds greater than 8,000 RPM do not enhance operation of brushes rated at 25,000 max. safe free speed.

PILOT BONDING AND ENCAPSULATED BRUSHES

PILOT BONDING

Used for cleaning paint, dirt, rust, and varnish from around rivet and bolt holes. By placing the pilot pin in the rivet or bolt hole the cleaning action is confined. Assures a positive electrical contact to eliminate static electricity buildup.

Catalog Number	Pilot Diameter	Brush Diameter	Wire Size	Brush Part Length
06721	3/32"	½"	.005SS	3/8"
06741	1/8"	½"	.005SS	3/8"
06761	5/32"	½"	.005SS	3/8"
06781	3/16"	½"	.005SS	3/8"
06801	¼"	½"	.005SS	3/8"

Stem Diameter - ¼" max. safe free speed 20,000 RPM.

ENCAPSULATED BRUSHES

Encapsulated wire wheel and end brushes provide remarkably strong brushing action for fast burr removal and uniform surface blending. The encapsulation material creates the short wire trim configuration that gives the fast cutting action characteristic with minimum pressure. Substantially increased safety factor.

Avoid application to surfaces over 180º F. Excessive temperature will soften or melt the encapsulation material.

Type	Catalog Number	Diameter	Wire Size	Arbor Holes	Approx. Running Face Width	Maximum Safe Free Speed (RPM)

SOLUTION SHOWCASE

END BRUSH TIPS

End brushes are an excellent solution for applications where space is an issue. An end brush is typically used with a high speed hand-held tool for applications including cleaning, polishing, deburring and surface preparation.

Looking for a more aggressive solution?
Try our Banded End Brushes

Concerned about marring and scratching your work piece?
Try our End Brushes With Cup Protectors. These protectors eliminate the marring and scratching of adjoining surfaces in deep well applications.

MINI-GRINDER CUP & WHEEL BRUSHES

Every major tool company has a series of mini grinders. Most of these have metric threaded spindles and the distributor has been required to carry an extensive inventory of mini grinder brushes. Not anymore. Brush Research Manufacturing has a method to reduce this unnecessary inventory. An adapter nut which fits any combination of mini brushes to mini grinders. All you need to carry are mini grinder brushes with a 5/8" -11 threaded arbor. Reduce your inventory and capital invested. Simply carry a few of the reusable adapter nuts and make life easier.

Style 1091

ELECTRONICS APPLICATOR BRUSH

.003 Natural Nylon Fill
1/8" SS Stem with Delrin Handle
5130-2 90 Degree

POWER BRUSH ENGINEERING GUIDE

Horsepower Required To Drive Brushes

Four Common Factors Governing the Horsepower Necessary to Drive a Power Brush

1. Brushing pressure required.
2. Resistance between work surface and brush (trim length).
3. Speed of the brush.
4. Brush face width.

Horsepower Approximation Guide
(Based upon the medium brushing action for 1" brush face)

Brush Dia.	Motor Size	RPM
4"	1/4 hp	3450
6"	1/2 hp	3450
8"	3/4 hp	3450
10"	1 hp	1750
12"	1 hp	1750
15"	1½ hp	1750

Wider face brushes require additional horsepower dependent upon the relative brush load. Long trim brushes can usually be operated with less horsepower than short trim brushes.

Recommended Surface Speeds for Brushing Application

Application	Surface Ft. / Minute
Removing Burrs	5500 to 7500
Removing Scale	7500 to 10000
Cleaning Welds	7200 to 9400
Edging Blending	4700 to 7500
Cleaning DRY	4000 to 5000
Cleaning WET	1900 to 4000
Surface Polishing	6400 to 8000
Surface Blending	8000 to 10000

Brushing Action

There are many variables in Power Brushing conditions. In many cases, one or more Power Brushes may accomplish the same results; however, if one brush does not accomplish the desired results, follow the suggestions below:

Desired Change in Results

+ Suggested Change in Brush

Faster Action

+ Run brush faster
+ Use heavier wire or filament
+ Use brush with shorter trim length
+ Use larger diameter brush

Finer Finish

+ Use finer wire or filament
+ Try tampico or abrasive nylon filament brush

Reach Irregular Surface Area

+ Use Brush with longer trim length for greater flexibility

Longer Life

+ Use finer wire and longer trim

Remove Burr Instead Of Roughing or Preening It

+ Increase brush speed
+ Use brush with shorter trim
+ Check brushing pressure to determine if tips are cutting not wiping.

Note: The speed at which the brush rotates is an extremely important factor. (See Table of Surface Speeds).

Portable Tools

The maximum recommended diameter brush to use with electric or air portable tools is 6".

Table of Surface Speeds (Peripheral Speed in Ft./Min.)

RPM	1" Dia	2" Dia	3" Dia	4" Dia	6" Dia	7" Dia	8" Dia	10" Dia	12" Dia	14" Dia	15" Dia

SAFETY SECTION

Power Brush Safety Requirements

Warning In normal power brushing operations, the material being removed, such as burrs, scale, dirt, weld slag, or other residue, will fly off the brush with considerable force along with brush filaments which break off due to fatigue.

The potential for serious injury exists for both the brush operator and others in the work area (possible 50 or more feet from the brush). To protect against this hazard, ***wear safety goggles or full face shields worn over safety glasses with side shields, along with protective clothing.***

You must follow all operator and safety instructions, as well as all common safety practices which reduce the likelihood of physical injury, or reduce its severity.

Summary of Power Brush Safety Requirements

Safety Goggles Safety goggles or full face shields worn over safety glasses with side shields ***must be worn by ALL operators and others in the area*** of power brush operations. Comply with the requirements of ANS Z87.1-1979 "Occupational Eye and Face Protection"

Guards Keep all machine guards in place.

Speeds Observe all speed restrictions indicated on brushes, containers, labels, or printed in pertinent literature. "MSFS" means Maximum Safe Free Speed (RPM) - spinning free with no work applied. For reasons of safety "MSFS" should not be exceeded under any circumstances.

Safety Standard Comply with the Safety Standards of the Industrial Division of the American Brush Manufactures Association and the American National Standards Institute ANSI B165.1 - 1985 - Safety Requirements - Power Brushes and ANSI B165.2 - 1982 "Safety Requirements - Power Brushes - Wood, Plastic, or Composition Hubs."

Protective Equipment Appropriate protective clothing and equipment must be used where there is a possibility of injury that can be prevented by such clothing or equipment.

***Warning!** Failure to observe safety precautions may result in injury.

Brush Usage Recommendations

Pressure Avoid excessive pressure when using a power brush. Excessive pressure causes over-bending of the filaments and heat build up resulting in filament breakage, rapid dulling, and reduced brush life. Instead of greater pressure on a brush, it is suggested that you try:

1) a brush with a more aggressive cutting action (increased wire size decrease filament length, change to a different brush type, i.e., knot type instead of crimped wire type), or

2) higher speed (increased R.P.M., increased brush diameter.)

***Important Note:** Never exceed the recommended Maximum Safe Free Speed R.P.M. (MSFS) rating of the brush.

Brushing Problems ***Do Not Allow Unsafe Conditions To Continue.*** Occasionally, due to worn bearings, a bent spindle, an unusual application, operator abuse, or inappropriate use, a brush may fail. A brush which is not received in acceptable condition for trouble-free operation may also fail. Do not use or continue to use a failed brush or one which is functioning improperly (i.e., throwing filaments, out-of balance etc.) as this increases the possibility for further brush failure and hazard of injury. The cause of the failure should be evaluated and corrected.

This information is based on the collective experience of the ABMA Industrial Division members and provided solely as a public service for the guidance of the users of the members' products. These recommendations are not necessarily complete with respect to any particular application and common sense safety considerations should be adhered to generally. Any applicable federal, state, local law or regulation, must be strictly adhered to, and is controlling over any recommendation contained herein.

Safety Instructions for Flex-Hone® and Twisted-In-Wire Brushes

The Flex-Hones and Twisted-In-Wire brushes, used under power, shall be securely held in a collet, chuck or similar holding device.

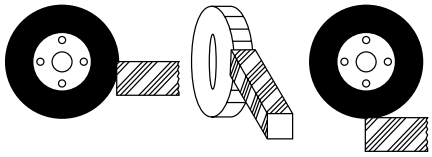
The operator shall secure the unit being honed or brushed and position all guards before starting the tool. The arrangement of the workplace shall ensure rotation of the brush on the true centerline to avoid deflection that may instantly multiply to destructive bending.

The shank of a Twisted-In-Wire brush and/or Flex-Hone®, because of its basic construction, is not inherently as strong as the shank on most other brushes.

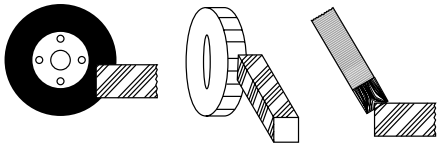
Therefore, it is even more important that the tool length be no longer than necessary to perform the work, and that other conditions of use avoid load applications and speed of rotation that will cause the shank to deflect, and therefore bend, instantly resulting in total destruction of the brush and creating an unsafe condition for the operator.

Failure to observe any requirements shown in the safety section will create safety hazards and can cause injury.

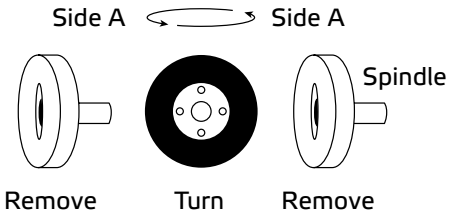
Correct
Tips doing the work



Incorrect
Excessive pressure can cause wire breakage



Self-Sharpening
When using wire wheel brushes, periodically reverse the direction of rotation to take advantage of the self-sharpening action that will result. This may be accomplished by removing the brush from the spindle and turning it side for side, and remounting securely.



GUARANTEED TEST ORDER PROGRAM (GTO)

For Samples or Testing

Contact BRM to speak to our engineering team. We believe that our premium products speak for themselves. For qualified production applications less than $50 NET, no charge samples will be provided. For testing over $50 NET, we offer a guaranteed test order program. The customer places an order and has 45 days to test and return the product for a full refund. Refunds will not be provided for product received after 45 days.

For customers without approved terms, a security deposit can be placed on a credit card. This will be promptly refunded within 7 days of receiving the returned test product.

(Please specify µ in. or µ m)

Application Type: **Final Finish** _____
(Please specify µ in. or µ m)

☐ Finishing ☐ Deburring ☐ Both

Approximate Burr Size _____

Micro Burr: Looks like a sharp edge, burrs are not visible to the naked eye.
Light/Feather Burr: Visible burrs and can easily be removed by hand.
Medium Burr: Small to medium sized burrs that require mechanical force to be removed.
Heavy Burr: Large burrs that are strongly attached and require heavy mechanical force to be removed.
Extrusion Burr: A substantial burr created from the base material being deformed and pushed outward.

TECH LAB SERVICE REQUEST FORM

Send In Your Part

Send in your part for evaluation. Once received, our surface finishing equipment is used to measure the part to create a baseline. We then continue on to create an improved finishing solution using BRM tools. Upon completion, your parts are re-measured. Finally, parts are returned with a full comprehensive report.

ATTN: Tech Lab
Brush Research Manufacturing Co., Inc.
4642 Floral Drive
Los Angeles, CA 90022

Thank you for allowing us the opportunity to work on your application. We believe that through testing and cooperation we can best design a solution to all of your deburring and finishing problems. These basic questions will help us expedite the tool selection process. Please use the additional comments section to describe any special circumstances present and/or identify the bore or surface needing finishing if there is more than one. We may require a sketch, drawing, or more information to complete our testing.
